James Wang
University Recruiter
Apple
Cupertino, CA

Dear James,

My name is Adityaa Magesh Kumar and I'm a senior at the Georgia Institute of Technology studying Computer Science with specializations in Artificial Intelligence and Networking. In addition, I am enrolled in Georgia Tech's BSMS CS program, which will allow me to pursue my MS in CS with a concentration in Machine Learning beginning Spring 2024. Based on my education and wide variety of technical experiences, I believe I will be a great fit for the engineering teams at Apple, especially those focused on backend infrastructure development like the server teams at Apple Health.

I wanted to express my interest in the Software Engineer Intern position at Apple Health. Specifically, I have experience in fullstack development at ServiceNow and backend infrastructure development at Amazon Web Services, which I believe would fit well with Apple's work in backend health infrastructure to process health data for its millions of users.

At AWS, I was tasked with making a backend internal tool to help improve the on-call workflows for my team. I used TypeScript and various AWS services like AWS Lambda, CloudWatch, CW Synthetics, S3 buckets, EventBridge to implement this backend automation tool. I designed and implemented an end-to-end workflow that would successfully alleviate the workload of on call engineers, making the entire process more efficient. Due to the immense progress I made with my internship project, it will be used as a starting point for a larger Amazon Connect wide initiative to improve on-call workflows across all engineering teams. My experience at AWS has given me the leadership and technical skills necessary to thrive in other backend focused roles like those at Apple Health. My familiarity and experience with AWS will be a huge asset to the work at Apple Health, which involves handling large-scale data processing using cloud services.

I am excited to join Apple, which is a leader in design and innovation, and known for creating revolutionary technologies. Thank you for considering my application and I look forward to potentially joining the Apple Health infrastructure team next year. I look forward to hear back from you soon.

Sincerely,
Adityaa Magesh Kumar
Georgia Institute of Technology

Summary

Posted: May 24, 2023

Weekly Hours: 40

Role Number:200480063

Imagine what you could do here. At Apple, extraordinary ideas have a way of becoming phenomenal products, services, and customer experiences very quickly. Bring passion and dedication to your job and there's no telling what you could accomplish. Apple's University Recruiting team is looking for a highly motivated, engineering students with a strong background in Back-End Engineering, Core OS, and Web Development to join its team of highly skilled software engineers.

Our software engineers are the brains behind some of the industry's biggest breakthroughs! macOS, Siri, Apple Maps, and iCloud — not to mention the system-level software for iPhone and Apple TV — all started here. These teams are on the front line of our constant charge toward innovation! We are actively seeking enthusiastic interns who can work full-time for a minimum of 12-weeks.

Key Qualifications

- You may meet or have interest in any one of the following qualifications:
- Strong object-oriented design skills, coupled with a deep knowledge of data structures and algorithms
- Proficiency in one or more of the following developer skills: Java, C/C++, PHP, Python, Ruby, Unix, MySQL, Clojure, Scala, Java Script, CSS, HTML5
- Experience in sophisticated methodologies such as Data Modeling, Validation, Processing, Hadoop, MapReduce, Mongo, Pig
- Experience with web frameworks such as AngularJS, NodeJS, SproutCore
- Proven experience in application development in Objective-C for macOS or iOS a plus
- Client-Server protocol & API design Skills
- Able to craft multi-functional requirements and translate them into practical engineering tasks
- A fundamental knowledge of embedded processors, with in-depth knowledge of real time operating system concepts.
- Excellent debugging and critical thinking skills
- Excellent analytical and problem-solving skills
- Ability to work in a fast paced, team-based environment
